

Quality Policy

At Excel Robotics Pty Ltd we manufacture and supply fabricated components for a range of industries. Components are made from mild steel, stainless steel, aluminium, bisalloy and other materials. General fabrication, robotic and manual welding, and other processes are used.

Our objectives are to consistently manufacture and supply to specification in full and on-time in order to maintain customer satisfaction.

We will do this through our Integrated Management System (IMS) which applies the requirements of the international ISO 9001:2015 standard for quality management systems and through the following principles:

ACCOUNTABILITY

At all levels in our organisation we are accountable for supporting the IMS and participating in the audit review and continual improvement processes required by the system. At Excel Robotics the IMS is supported and promoted for the benefit of the Company, our clients, interested parties in the community (including regulators) and our people,

EXCELLENCE

We are a client focused organisation that understands and strives to meet client expectations. Within our organisation, we embrace the process of continual improvement based on the factual analysis of data, comprehensive training, and shared experience.

RISK MANAGEMENT

We adopt a systems approach to management which recognises that better results are achieved through the process of identifying and managing risks, resources and activities. Our processes control risks.

ONE CONSISTENT APPROACH

Our managers and workers are trained in the Integrated Management System. They follow System instructions and contribute to the System's continual improvement. This includes monitoring and measuring the achievement of our quality objectives.

This Quality Policy is periodically reviewed to ensure it remains suitable for Excel Robotics and is communicated to our Workers and available to Interested Parties.
